Dear Kendyl:

We have completed a first draft of the patent application for the above-captioned invention. We have described the invention as we understand it. Please review the draft and provide us with your comments. As you review the draft, please keep the following guidelines in mind. First, the application must be accurate. By that, the rules of practice require that the application and specification teach a person of ordinary skill in the art how to duplicate the invention without having to resort to undue experimentation. Second, the application must teach the respective preferred embodiment. In other words, it must teach the way the inventors prefer to practice the invention. Third, the application must teach the best mode of carrying out the invention. Often the preferred embodiment and the best mode are identical. Fourth, the application should be complete, i.e., it must enable the invention. This means that no detail should be missing that is not well known to persons practicing in this field.

Recall that we are writing this application with an eye toward four potential audiences, each with a different view of this document. Our first audience is you, the inventors, who must be satisfied with the draft before the application can be filed. The second audience is the patent examiner. We have prepared the draft of this application to minimize prosecution difficulties. The third and fourth potential audiences are the judge and the jury, should you ever choose to enforce a patent that issues from this application against an infringer. It is for these audiences that we strive to make the invention simple and understandable to persons unfamiliar with your technology. As you might imagine, there are many other potential audiences: academics, infringers, members of the public interested in the technology, competitors, licensing partners, etc.

After you review the draft, please provide us with your corrections, comments and suggestions. We will then work with you to incorporate your recommendations where appropriate and finalize the draft. Do not hesitate to contact me if you have any questions or comments concerning this matter.

Very truly yours,

HAVERSTOCK & OWENS LLP
